

Eyes On Site

Remote Monitoring for Upstream Oil and Gas at 10% of the Cost

Easy and Effective Monitoring for Well Sites, Risers and Tank Batteries

- Know about issues before the operator starts his rounds, so **problem sites are visited first**
- Maintain safety and security while reducing site visits, so **the same operators can do more**
- Record continuous gauge readings between site visits, for a **more complete production record**
- Know about theft and vandalism when it occurs, with **video evidence for police**

See and Feel Remotely

- Tells the remote Operator much of what could be learned by visiting the site
- Use the camera to show a site overview or to read gauges
- Vibration Sensor records pipe vibration, indicating production or the pig going by
- Alarms on theft or disturbance. If 2 units can see each other, you have the theft in pictures.

Installs in 5 Minutes

- Attach to pipe or fence with pipe clamps or zip straps
- Aim it where you want it; it swivels and elevates on its base.
- No antenna tower, uses the latest 4G LTE 100km range cell data service
- Secured and Encrypted remote viewing from a mobile app
- Your data is safe in the cloud, no matter what happens on site. Can host with corporate IT.

Works on Your Site

- Intrinsically Safe Class 1 Div 2 modules run 24 hrs and charge from sunlight
- Temperature range -40 to +70 C

Easy to Get

- Order online with a credit card, expect a courier the next day.
- Very inexpensive, easy on the budget.
